

Handling / Storage Guidelines

Packaging

Saint-Gobain NorPro supplies carbon Raschig rings packaged in 200 liter (7 cu ft) steel drums. Drums are plastic-wrapped and palletized.

Handling

Use a forklift or other appropriate handling equipment to load/unload pallets into and out of trucks or shipping containers. Use suitable pallet handling equipment when moving pallets.

Do not open packaging until the goods are ready for installation.

Storage

Steel drums should remain plastic-wrapped and palletized in any storage environment. Drums may be stacked no more than two pallets high.

Indoor, dry storage in a closed warehouse is preferred.

Temporary outside storage in open-sided buildings or tents set on concrete or gravel pads is acceptable.

- Thoroughly cover all packaging kept in outside storage for protection from moisture.
- Unimproved yards and standing water should be avoided.
