

## Handling / Storage Guidelines

### Packaging

NorPro® ceramic products may be packaged in bulk supersacks, polymeric bags, steel drums or in cardboard cartons. All packaging is plastic-wrapped and palletized.

### Handling

Use a forklift or other appropriate handling equipment to load/unload pallets into and out of trucks or shipping containers. Use suitable pallet handling equipment when moving pallets.

Do not open packaging until the goods are ready for installation.

### Storage

Products should remain plastic-wrapped and palletized in any storage environment. Do not stack products packaged in supersacks, polymeric bags or cardboard cartons. Steel drums may be stacked no more than two pallets high.

Indoor, dry storage in a closed warehouse is preferred for all packaging.

Temporary outside storage in open-sided buildings or tents set on concrete or gravel pads is acceptable.

- Thoroughly cover all packaging kept in outside storage for protection from moisture.
- Supersacks and polymeric bags must be protected from sunlight. Complete coverage of the packaging with opaque tarps or sheeting is needed to prevent ultraviolet light attack. Significant and permanent damage to packaging fabric and strapping will rapidly occur from exposure to sunlight.
- Unimproved yards and standing water should be avoided for all packaging.

Additional product handling and storage guidelines can be found at [www.norpro.saint-gobain.com](http://www.norpro.saint-gobain.com) or by contacting one of our Saint-Gobain NorPro offices.
